

Research in live animals is still essential for basic research and the pharmaceutical industry for the discovery, development and production of new pharmaceuticals. At SCANBUR we believe that all experimental animals should be housed in an environment that supports good animal welfare while allowing to perform good research. SCANBUR provides equipment, bedding, enrichment and diet for animal research facilities, by combining our technical knowledge in equipment development with a biological knowledge we succeed in providing solutions that fulfill the needs of specific research animals.

We comply with EU regulations (DIRECTIVE 2010/63/EU) and national regulations for housing of research animals and take pride in providing solutions that are best in class also when it comes to implementing the 3R (replacement, reduction and refinement) principles. This provides a basis for researchers to do high quality animal research and advancing animal welfare. We are committed to go beyond just meeting the regulatory requirements and we seek to implement best practices.

Our suppliers of bedding, enrichment, diet and equipment, are world leading companies within their fields of expertise. Through dialogue, SCANBUR together with our collaborators, not only maintain high animal welfare, but continuously strive to increase welfare for animals in science. All collaborators comply with EU regulations (DIRECTIVE 2010/63/EU).

Additionally, SCANBUR has an Animal Welfare Body, where animal welfare issues that may occur, are discussed, handled and solved properly and timely. SCANBUR's Animal Welfare Body comply with EU regulations (DIRECTIVE 2010/63/EU).
